The protein contains 9 zinc finger domains, which are homologous to the C2HZ finger domains of Xenopus TFIIIA, except for the 6th finger domain, which has only 3 amino acid residues between 2 cysteine residues, instead of 5 amino acid residues for Xenopus TFIIIA. The protein (optionally in recombinant form) and encoding gene may be used in diagnosis, instead of 5 identification or therapy of hereditary diseases such as cancer, or other diseases resulting from abnormal transcriptional control, and to analyse the mechanisms involved in their activity
                                                                                                                                                      Human, transcription factor-IIIA, hTFIIIA, DNA binding protein, ribosome, zinc finger, diagnostic, probe, transcription control, antitumour,

The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Y;

encoded polypeptides (AAM)8121-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, activity, tissue growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, and may be useful in the diagnosis and/or inflammation. Note: Records for SEQ ID NO 2110 (AAKS2581), 2111 (AAKS2582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                     Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 265

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal ectivity of (II) as useful in gene therapy techniques to restore normal cusful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a usplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic dissorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the printed specification, but was obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       211 KPYIC--BECGKAPKYSSALNTHKRIHTGEKPYKC--DKCDKAFIASSTLSKHBIHTGK

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) are the polymucleotides are also used activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of plypeptide and polymucleotide sequences have applications in diagnostics formsics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and and and not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the will be printed specification, but was obtained in the printed specification, but was obtained in the printed sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- FUNCTION: May be involved in transcriptional regulation.
-!- SUBCELLULAR LOCATION: Nuclear (Probable).
-!- TISSUE SPECIFICITY: T AND B CELL LINES.
-!- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-FINGER PROTEINS.
-!- SIMILARITY: Contains 1 KRAB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            [3]

Proc. Natl. Acad. Sci. U. S.A. 88:3606.3612(1991).

-! SUBCELLULAR LOCATION: Nuclear (Probable).

-! SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-FINGER PROTEINS.

-!- SIMILARITY: CONTAINS 1 KRAB domain.

-!- SHILARITY: CONTAINS 1 KRAB domain.

-!- CAUTION: THE SEQUENCE PROM POSITION 1159 TO THE C-TERMINAL IS DERIVED FROM THE TRANSLATION OF AN ALU REPEAT.

 REGULATION PROCESSES.
SUBCELLULAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: OOCYTES AND IN SPECIALIZED CELL TYPES SUCH
                                                  PTM: Phosphorylated.
SIMILARITY: DEDNOS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-FINGER PROTEINS.
SIMILARITY: Contains 1 KRAB domain.
                                                                                                                                                               InterPro; IPR007087; Znf_C2H2.
